

FERNANDO QUIJANO
ECON 202
11:00 a.m.
Fall 2001

1. I like the power point presentation and he knew the material very well. The tests off the internet help me out a lot for preparing for the classroom tests. This course help me understand how interest rates work and how the government keeps the economy steady. I felt he was very fair in his grading of test and homework. I really enjoyed the class but it moved kinda fast.
2. I believe that the professor of Macroeconomics has a very in depth knowledge of the subject that he is teaching. Sometimes though I wish that there was a better way for him to share and teach that knowledge to the students. I think that most students have a hard time understanding the material that he presents in class. Other than that I enjoy the class for the most part.
3. I found this course to be very challenging but also very educational. I felt that the assignments were appropriate for this subject as well. The power point presentations were a very useful tool to have for studying for tests. Another thing is that Dr. Quijano knows a lot about macroeconomics. I enjoyed this class because I learned a lot about the economy and how it works. I would recommend taking this course to other students. The grading system was also very nicely administered. Overall, this course was taught well and was easy to follow. Dr. Quijano did a great job.
4. The instructor is very knowledgeable in the subject area but I did not learn very much from the class. The power point was helpful in some ways but because we had take home tests I did not have to refer to it very often. I did like having the tests posted in the Internet but knowing that the answers were also there for us I did not learn much. If the tests would have been in class and still posted in the internet, I would of got more from the course because then I would of had to at least know a little about the topic instead of just filling in the circles. I feel I did not walk away with very much knowledge from this class wherein Microeconomics I really enjoyed the course and gained a great deal from it. I enjoyed this course but felt I didn't learn very much.
5. Macroeconomics with Fernando was a very useful and informative class. Fernando has extensive knowledge in the field of economics and I would recommend anyone to take a class with him. Fernando is very professional and is a great teacher at getting his point across. He did a good job in implementing technology in the classroom by having the students run off each of the chapters from the internet. The power point presentations in class are very appropriate and informative for the class. I gained a lot of knowledge about economics that I didn't know before the class the instructor did a great job in presenting the information to the students. Fernando's tests were challenging but adequate for the course. He was fair in grading and even reviewed the material that was going to be on the test the class period before. I would definitely recommend to other students taking a course from Fernando for his knowledge of economics I think they

would learn a lot from the class.

6. The professor knows the material very well. He presents the material well, but at times some of the material could be a little clearer. The use of the computer is used extensively in the class. The professor has put the syllabus and other class requirements on the Internet for students to view. This is very helpful and useful. I feel the Power Point presentation is put together well along with the material used with the publisher of the book. The course had plenty of content. The class greatly enhanced my knowledge of economics. Most of the material we went over was material that I hadn't been aware of before. The professor was very fair in the way he graded and tested the class. The majority of the class is in the A-C range. The homework assignments help a little. The web quizzes were also useful when it came time to study for the test. This is probably one of the better courses I have attended at Dickinson State University.
7. I start my evaluation by rating the professor on his knowledge of the subject. Fernando Quijano is one of the best teachers I have had when it comes to depth on their specific course. I have learned many new and interesting facts about Macroeconomics that will help me later in life. Especially since I am going into the business field. Another thing that I really enjoyed about the class was the use of the Internet to help study for tests. The online study guides really helped me out when it came test time. I think the thing that helped me out most in the class was the Power Point presentations that Fernando used in class during his lectures. This made it easier for me to follow along and understand what he was lecturing about. The last thing I would like to talk about is the fact that Mr. Quijano made class fun and that made me really want to come to class and it helped me to learn also. Nobody wants to go to a class when they don't like their professor. Overall I really enjoyed the class. If someone were to come and ask me about Macroeconomics, I would definitely recommend it to him or her.
8. The professor has a profound depth of knowledge in Macroeconomics. Sometimes the fundamentals are buried in the complicated examples the instructor gives, but eventually is understandable. The instructor's power point examples that are available to download off of his website is very helpful in studying for tests and understanding concepts. His website is very easy to use and has been very helpful in obtaining worksheets for class and posted grades. Also, the practice tests offered for this class were very useful in studying for the final test in which we could access them via internet and study in groups outside of class. Although I might not have grasped and retained a lot of the harder concepts of Macroeconomics, I do believe that I have learned the basic concepts and will have a general understanding to assist me in the future. The grading is also very fair in that he lowers the percentages to give a better chance of obtaining a higher grade. I am glad that the instructor provides as much information that he does in the form of handouts and worksheets because a lot of things can be missed in lecture classes by just taking ordinary notes.
9. Professor has great and thorough knowledge of subject. Powerpoint was used.

10. Professor was very knowledgeable about macroeconomics. I thought the practice questions on the Internet were very helpful, when studying for an exam. Homework was posted on the web page, which was helpful if you weren't able to make it to class. Grades were posted on the internet—it's nice as a student to know where you stand in a class.
11. I think that your power-point presentations are very helpful. You do an excellent job at putting the presentation together. I think that you should continue to use these in your classes. They are easy to understand, as well as more interesting than strictly reading out of the book. It saves a lot of time to simply print off the material on the internet. The slides are a great way to study from. I really like your testing criteria this semester. I seemed to learn more by studying the questions off the Prentice Hall website first, and then get tested on it. I liked being able to do the quizzes on the internet and then get credit for it. It really helps with raising my grade. I agree with your attendance policy to an extent. I agree that you should be in class, and be penalized if you are consistently missing class. Although, you need to learn the names and faces of your student. I know for a fact that there are certain individuals that rarely come to classes and are still passing and receiving credit for being in class, while other students may only miss once or twice, and are being penalized. You need to be fair. I thought that Macro-Economics was extremely more interesting than micro-economics. You acted like you enjoy this class more. I can definitely say that I have learned a lot from this class, more than I did in Micro. There is no doubt in my mind that you know your material. Since I am a senior, I have obviously taken many classes at DSU. I enjoy being in your classes. Compared to other classes, I know that I have learned material in these classes that I will use throughout my life.
12. I feel that your knowledge and style of the presentations are very sufficient. There is no doubt that you know what you are teaching us. The use of the English language and diverse personal and professional background is excellent. The use of technology as far as software and information received off of the internet provide us with highly useful materials. I think that the use of PowerPoint presentations are beneficial to us. For us being able to see the materials as you go over it makes it easier to comprehend things. I think that it should continue to be used. I believe that this course I have gained quite a lot of economic knowledge, as well as the math comprehension and the computer knowledge we had to attain for the spreadsheet assignments. As far as fairness and efficiency in testing and grading was concerned, I thought that it was done well. There was the right amount of tests and assignments. Even though some of the spreadsheet assignments got a little problematic. I really like and learned from the internet tests. It doesn't seem like the internet tests would be that helpful, but I really do remember a lot from them. I also, like that our grades were always posted right after we took our exam. A couple of thoughts on my part would be that points need not be deducted for missing class, one just doesn't get any points for that day. I can imagine the excuses you hear, but sometimes there are certain circumstances that come up and you can't do anything about them. Also, I thought it was a little extreme with giving one student a separate test. I think there could have been other ways to solve the problem.

13. Fernando makes his classes fun, which makes a person want to attend class. Fernando's PowerPoint presentations make it easy to follow along. Fernando's use of the technology available at DSU is one of the best. Fernando tries to make sure everyone has a chance to get a good grade. Fernando's use of the prehall website really helps out. The online tests were very useful in the course. Macroeconomics helped me better understand economics as a whole.
14. I feel Mr. Fernando has a very thorough knowledge of Macroeconomics. He has a way of explaining it many ways for us students to understand. I like the way he printed out our notes on the web. It made me feel I had to come to class because we would complete the notes the next day or so. The notes made me understand the whole concept of economics better because of the charts and graphs that went along with it. In comparing the book to his notes, it was all the same to me. I like the notes better because it was easier to understand. The notes gave a shorter version of everything instead of reading the whole chapter or two. I also like the Internet tests very much. It also gave me a better understanding of the class as a whole. Mr. Fernando treated everybody fairly and with respect. Having everything on the internet (grades, notes, etc.) is a really good idea. I wish all the teachers at Dickinson State University would do that. Posting stuff on the web for students to see, I feel will make the students more responsible. Overall, I really enjoyed the class. Before I took Economics, Microeconomics and now Macroeconomics, I have a better understanding of things. In comparing this class to others is kind of hard. I guess I would like to see other teachers post more of their stuff on the web.
15. The Professor is a very intelligent and with a thorough knowledge of economics. But, he teaches way over my head at a different level. I believe that the rest of the class as well as myself felt like kids more than once in this class. The professor has power points and the Internet for a reference, which is a big help to the student. He uses a lot of computer stuff and tries to get the class involved. I feel that he is a decent man sometimes because he gives you a second chance. He looks at class attendance and he gives you some easy points. If you are having trouble with the class he will find a way to give you some points to get your grade up. Although I'm doing OK in this class, I don't know if I would take another course from this professor.
16. I enjoyed the class a lot. Good teaching strategies. The power point presentations are really helpful. Like the website because it is updated with our latest grades and what we did in class day by day.
17. I feel that at times Mr. Quijano was a little too worried about what the assignment looked like, instead of being concerned if we understood the concept of it. I feel however that he is a fair instructor, and has a large amount of knowledge on the subject. I like the fact that the power points are available to the students before class and are used in class. I feel that this takes away the guessing of what information the student needs to write down. This way the student can concentrate more on what the instructor is saying, and trying to teach. I feel that the tests have been fair and efficient. When I have needed the help on an assignment he was available and willing to help. I would and will take

another class from Mr. Quijano in the semesters.

18. I thought the practice test on the internet was a good learning tool. I thought the spreadsheets should have been worth more points because my partner and I spent a lot of time working on them. Quijano's knowledge of macroeconomics is great and his use of technology like the Internet is good. I don't think his final exam was fair or effective. I think memorizing thirteen of his essay answers word for word and then answering two in class was a waste of time. I didn't appreciate that he told his microeconomics class that we were his worst macroeconomic class ever.
19. The professor obviously knows much about his field of study, but he needs to realize that we do not and his condescending attitude at times isn't very professional. The power point presentations are very good and very helpful in the class. The professor used them efficiently. The questions and tests provided to the book publisher are also very good. I learned a little bit about spreadsheets from Economics. I learned a little bit about Economics itself, too, but I think the professor should have only one type of test for the students instead of changing what the next test will be seemingly every day. Some of the tests were good, but others were not. When an entire class does bad on a test, the entire class, the class isn't the problem, the test is. When this happened, I didn't appreciate the professor making us all feel stupid by being condescending, and for telling his other classes that our class is "so stupid." While I thought the homework was good homework to have, I feel the professor focused on the wrong ideas. I think the professor should have been happy if we understood the graphs and created them correctly. Instead, he concentrated on the appearance. Using the right colors and making it look exact were the wrong things to concentrate on. It should have been enough to get the graph in the first place. To be perfectly honest, I didn't exactly care for this class. There were too many changes (to tests) and too many times when the professor was condescending and just plain rude to the class. There were things I did like. I liked the multiple choice tests, the amount of material covered was good, the class was entertaining at times, etc., but overall the class was only average.
